

CONTENTS

C O N T E N T S

1. Introduction.....	3
2. Nucleic acids in modern molecular biology.....	11
2.1. General considerations	11
2.2. Genes, nucleic acids, genetic genius	13
2.2.1. Synoptic frame	13
2.2.2. Biological information and nucleic acids.....	16
2.3. Relationship DNA-molecular filiation	20
2.3.1. Filiation levels	20
2.3.2. Living matter and DNA sequences	21
3. Genome and genic organisation of living matter	23
3.1. General considerations	23
3.1.1. Genome in viruses	26
3.1.2. Genome in prokaryotes	28
3.1.3. Genome in eukaryotes	30
3.2. Interaction genotype-phenotype-environment	31
3.2.1. Concept of genotype.....	32
3.2.2. Concept of phenotype.....	33
3.2.3. The action of the environment	34
3.2.4. Genes and the genetic program - general coordinatives	35
3.3. Transmission of genetic information.....	36
3.3.1. Overview	36
3.3.2. Process of replication	37
3.3.3. Process of transcription	42

3.3.4. Process of translation.....	45
3.3.4.1. Specificity of translation	46
3.3.4.2. Characteristics of the genetic code.....	48
3.3.4.3. Translation apparatus	52
3.3.4.4. Activation of amino acids	54
3.3.4.5. Biosynthesis of proteins – steps	55
3.3.4.6. Energogenesis and the regulation of protein biosynthesis	60
4. Investigation of nucleic acid.....	63
4.1. General consideration	63
4.2. Methods to determine the sequences of nucleic acids	65
4.2.1. Synoptic view	65
4.2.2. Maxam-Gilbert method	66
4.2.3. Sanger-Nickl-Coulsen method	67
4.3. Methods of hybridization of nucleic acids chains	70
4.3.1. Synoptic view	70
4.3.2. Types of hybridization.....	70
4.4. Methods of detection by molecular sondes	72
4.4.1. Synoptic view	72
4.4.2. Radiomarked molecular sondes	74
4.4.3. Chemiomarked molecular sondes	75
4.4.3.1. Directly marked molecular sondes	75
4.4.3.2. Indirectly marked molecular sondes	75
4.5. Methods of investigation the molecular fragments of nucleic acids	76
4.5.1. Synoptic view	76
4.5.2. Southern blotting	76
4.5.3. Northern blotting	78
4.6. Method of amplification by polymerase chain reaction (PCR)	79
4.6.1. Synoptic view	79

CONTENTS

4.6.2. Methodological principles	79
4.6.2.1. Peculiarities of the amplification cycle	81
4.6.2.2. DNA investigation by the PCR amplification method	83
4.6.3. Applications of the PCR amplification method	84
4.6.3.1. Applications in diagnose	84
4.6.3.1.1. Applications in eredopathology	84
4.6.3.1.2. Applications in oncology	85
4.6.3.1.3. Applications in the detection of infections	85
4.6.3.2. Applications in forensic medicine	86
4.6.3.3. Applications in gynecology	87
4.6.3.4. Applications in genome mapping	87
4.7. Method of evaluation of the restriction fragment length polymorphism (RFLP)	88
4.7.1. Synoptic view	88
4.7.2. Methodological principles	89
4.7.3. Applications of the methods of evaluation of RFLP	91
4.7.3.1. Reverse genetics	92
4.7.3.2. DNA fingerprint	94
5. Natural genic recombination	97
5.1. General considerations	97
5.2. Genic recombination in viruses	98
5.3. Genic recombination in prokaryotes	99
5.3.1. Transformation	100
5.3.2. Conjugation	103
5.3.3. Sexduction	105
5.3.4. Transduction	106
5.3.5. Transfection	108
5.4. Genic recombination in eukaryotes	109
6. Biotechnologically mediated genic recombination	113

6.1. General considerations	113
6.2. Operating means for recombinant DNA	115
6.2.1. Restriction and modification enzymes	115
6.2.1.1. Restriction enzymes	117
6.2.1.2. Modification enzymes	122
6.2.2. Enzymes of DNA polymerases group	122
6.2.2.1. DNA-polymerases - DNA dependent	122
6.2.2.2. DNA polymerases - RNA dependent.....	123
6.2.3. Enzymes of the DNA ligases group	124
6.3. Strategies for the obtainment of recombinant DNA.....	125
6.3.1. General principles.....	125
6.3.2. Concept of vector	126
6.3.2.1. Plasmids	127
6.3.2.2. Bacteriophages	129
6.3.2.3. Cosmids	130
6.3.3. Concept of passenger.....	131
6.3.4. Formation of recombinant DNA molecules.....	133
6.3.5. Cloning of recombinant DNA	135
6.4. Genic recombination – synopsis.....	137
6.4.1. Gene transfer by plasmids	138
6.4.1.1. Use of genomic DNA.....	139
6.4.1.2. Use of messenger RNA	140
6.4.2. Gene transfer by viruses.....	141
7. Biotechnologic applications in vegetal and animal reign.....	143
7.1. General considerations	143
7.2. Biotechnologic applications in vegetal reign	144
7.3. Biotechnologic applications in animal reign	147
8. Biotechnologic applications in food science and pharmacy	151
8.1. General considerations	151
8.2. Biotechnologic applications in food science	152
8.2.1. Enzymes with attributes of food additives	152

CONTENTS

8.2.1.1. Enzymes in general biochemistry	153
8.2.1.2. Enzymes in food biotechnology	158
8.2.2. Obtainment of enzymatic microbiological additives	159
8.2.3. Obtainment of enzymatic biochemical additives	161
8.2.4. Obtainment of enzymatic compounds by methods specific for molecular biology	162
8.2.5. Investigations on enzymatic systems in situ	164
8.3. Biotechnologic applications of pharmaceutical interest.....	165
8.3.1. Somatostatine	165
8.3.2. Insulin	166
8.3.3. Somatotrope hormone	168
